# ptn 轉檔程式說明

# 載入 dicom

- 1. 拖拉 dicom 資料夾 至 3D Slicer
- 2. 點選 ok

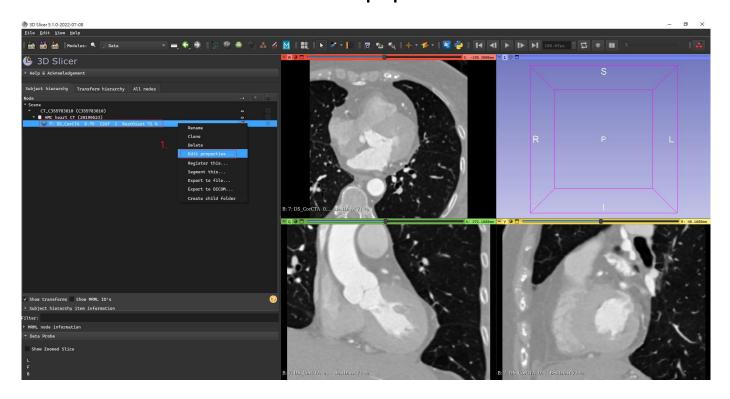

3. 點選 病患

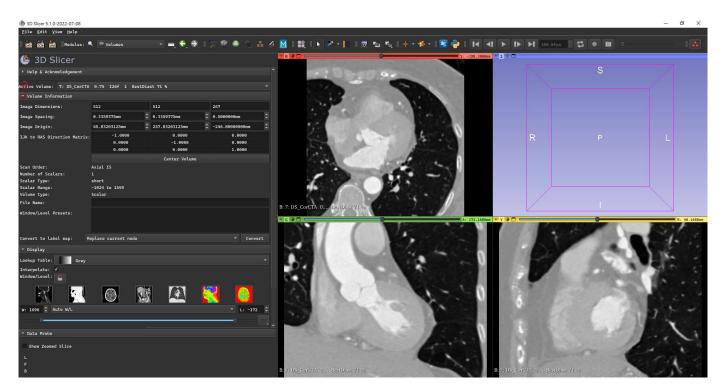

## 顯示 CT 影像資訊

1. 點選 影像體積,點擊 滑鼠右鍵,點選 edit properties

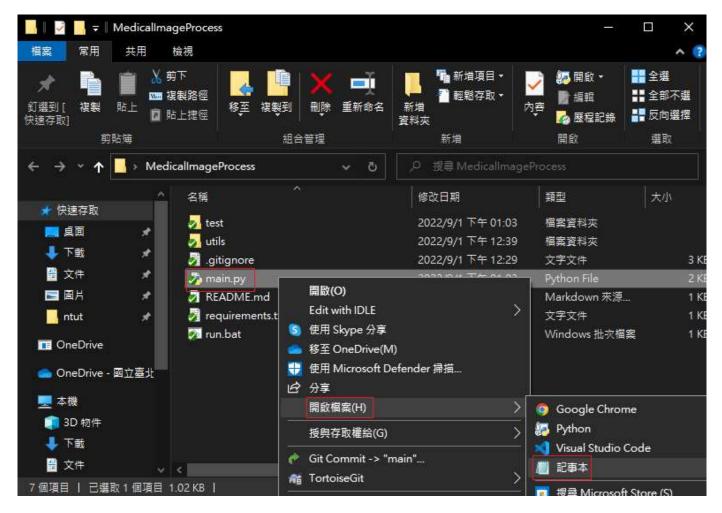

2. 點選 Volume Infomation , 展開顯示 CT 影像資訊。

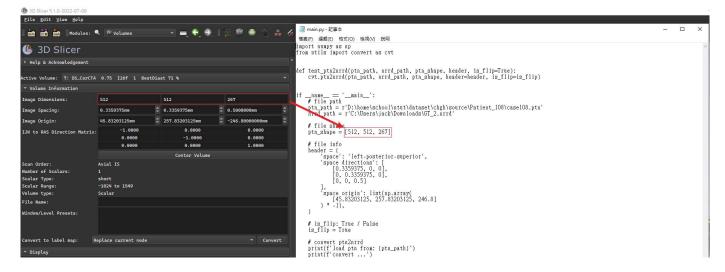

# 設定轉檔資訊

1. 於 main.py (http://main.py) 點選 右鍵,點選 開啟檔案,點選 記事本。

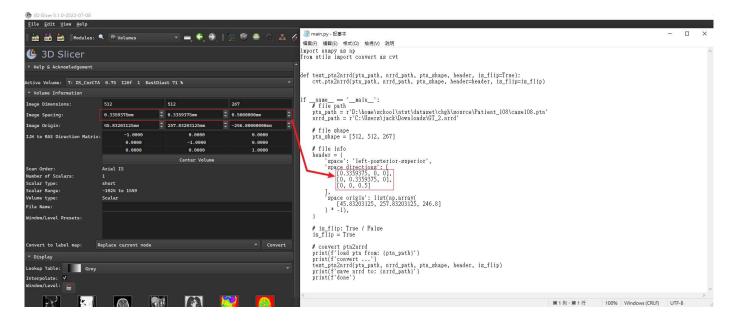

2. 設定 ptn 檔案位置 (ptn path) 、 轉檔後輸出位置 (nrrd path) 。

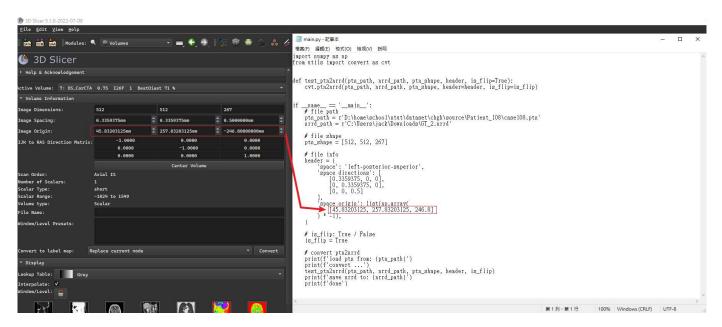

```
🌉 main.py - 記事本
                                                                                                                                                                                                                                     X
  檔案(F) 編輯(E) 格式(O) 檢視(V) 說明
 import numpy as np
from utils import convert as cvt
def test_ptn2nrrd(ptn_path, nrrd_path, ptn_shape, header, is_flip=True):
    cvt.ptn2nrrd(ptn_path, nrrd_path, ptn_shape, header=header, is_flip=is_flip)
if __name__ = '__main__':
    # file path
    ptn_path = r'D:\home\school\ntut\dataset\chgh\source\Patient_108\case108.ptn'

       # is_flip: True / False
       is_flip = True
       # convert ptn2nrrd
       print(f'load ptn from: {ptn_path}')
print(f'convert ...')
test_ptn2nrrd(ptn_path, nrrd_path, ptn_shape, header, is_flip)
print(f'save nrrd to: {nrrd_path}')
print(f'done')
                                                                                                                                                       第1列,第1行
                                                                                                                                                                                     100% Windows (CRLF)
```

### 4. 設定 space。

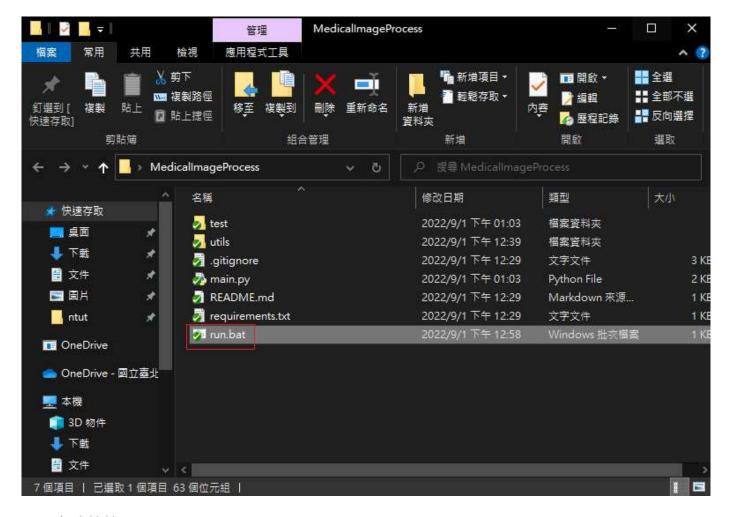

### 5. 設定 origin。

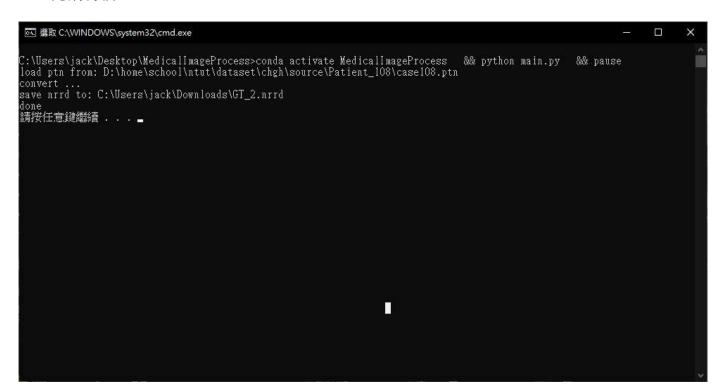

6. 使用 Ctrl+S 儲存檔案。

### 執行轉檔

#### 1. 點選 run.bat, 執行轉檔

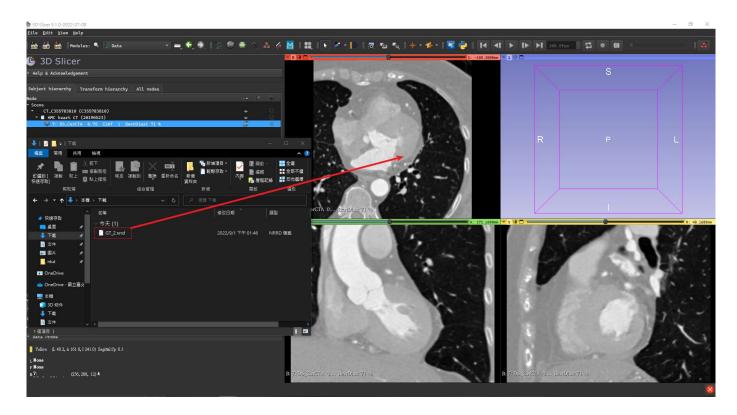

#### 2. 完成轉檔。

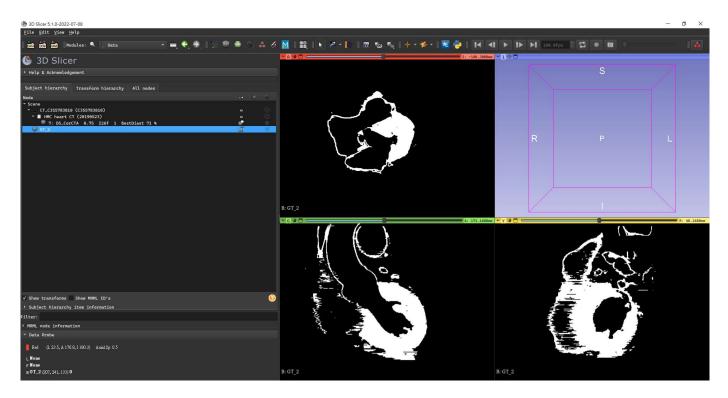

### 載入 nrrd 檔案

### 1. 拖拉 nrrd 檔案 至 3D Slicer。

### 2. 完成載入 nrrd 檔案。
